# Open below link to setup MongoDB

The screenshot shows the MongoDB Atlas homepage. The navigation bar at the top includes the MongoDB logo, links for Products, Resources, Solutions, Company, and Pricing, a search icon, language settings (Eng), Support, Sign In, and a Try Free button. The main heading reads "Loved by developers. Built for The Edge". Below this, a paragraph states: "You don't need a separate database to support transactions, rich search, or gen AI. The world's most popular document database is now the world's most versatile developer platform." A "Start Free" button and a "Learn More" link with a right arrow are present. On the right, there are visualizations of a code editor with a RealmObject class, a mobile app interface showing inbound/outbound counts and warehouse health, and a "Contact Us" button. The footer features four statistics: 47k+ Customers, 118 Regions across AWS, Azure, and Google Cloud, 175K+ Developers join every month, and #1 Most used modern database.
